Homework 3: Vertex Form of a Quadratic Equation

**** This is a 2-page document! ****

Graph each equation and give the axis of symmetry, vertex, domain, and range. Then, identify the transformations of the equation from the parent function.

1. $y = -x^2 - 3$

Without graphing, describe the transformations from the parent function.															
7. $y = (x - 2)^2 - 1$	8. $y = 4x^2 - 5$	9. $y = -\frac{1}{2}(x + 1)^2$													
Transformations from the parent function are given below. Write an equation to represent the function.															
10. reflected over the x -axis, then translated 6 units left	11. translated 1 unit right and 5 units down														
12. vertically stretched by a factor of 3, then translated 4 units up	13. reflected over the x -axis, then vertically compressed by a factor of $\frac{1}{4}$														
14. reflected over the x -axis, then translated 8 units left and 3 units up	15. vertically stretched by a factor of $\frac{5}{2}$, reflected over the x -axis, then translated 3 units down
